

PIKESH MAHARJAN

Data Engineer | ETL & Data Integration | Data Quality & MDM | Azure & Databricks

Dubai, UAE • pksmaharjan.pm@gmail.com • +971 54 295 2047

linkedin.com/in/pikesh-maharjan-6022341b4 • github.com/MeePks • pikeshmaharjan.com.np

Employment Visa (NOC available) • One-month notice period

PROFESSIONAL SUMMARY

Data Engineer based in Dubai, UAE, with 6+ years of experience building dependable ETL pipelines, data-quality processes and analytics-ready platforms. Works across SQL, Python, PySpark, Azure Data Factory, Databricks and specialist ETL tooling (SSIS, Actian DataConnect, Aperture Data Studio) to turn fragmented operational data into trusted, usable information. Current focus: entity resolution, Golden Records, Master Data Management, Bronze/Silver/Gold lakehouse architecture and automation that reduces manual preparation while improving governance and reliability. Delivered high-volume data solutions for global retail clients including Amazon, Walmart Mexico and Home Depot. Microsoft Certified Power BI Data Analyst.

CORE SKILLS

- **Languages:** SQL, T-SQL, PL/SQL, MySQL, Python (pandas, SQLAlchemy, openpyxl), PySpark, PowerShell
- **Databases & Modeling:** SQL Server (stored procedures, views, CTEs, window functions, indexing, tuning), Azure SQL, PostgreSQL, Oracle; star & snowflake schemas, fact/dimension modeling
- **ETL & Orchestration:** Azure Data Factory, SSIS, Actian DataConnect, Aperture Data Studio, Control-M, Apache Airflow; batch & streaming ingestion, incremental/watermark loads, SCD Type 2, REST APIs
- **Cloud & Lakehouse:** Azure Databricks, Delta Lake, Unity Catalog, Spark Declarative Pipelines, Auto Loader, Spark SQL, Azure Blob/Storage
- **Data Quality & MDM:** Profiling, source-to-target mapping, validation/QC rules, deduplication, fuzzy matching, entity resolution (Splink), Golden Records, reconciliation
- **BI & Tools:** Power BI (dashboards, apps, RLS, Power Query M), Tableau; Git, Bitbucket, Jira, VS Code, Visual Studio

PROFESSIONAL EXPERIENCE

Data Engineer

Mar 2026 – Present

Watt Utilities (Watt.co.uk) • Dubai, UAE • On-site

- Design scalable ETL pipelines that integrate, transform, validate and enrich internal and external data, using Aperture Data Studio, SQL/MySQL, Python, Azure and Databricks.
- Integrate UK energy supplier, CRM, Companies House, Google/Places, flat-file and third-party data to improve CRM completeness.
- Develop and optimize Azure Databricks/PySpark transformation logic for high-volume supplier data cleansing, enrichment and CRM integration, as part of migrating legacy processing to cloud architecture.
- Develop cleansing, standardization, deduplication, fuzzy-matching and entity-resolution processes for company and site data.
- Build Golden Record and Master Data Management processes supported by measurable data-quality and reconciliation rules.
- Develop Bronze, Silver and Gold architectures using Databricks, Delta Lake, Unity Catalog and Azure Storage.
- Automate recurring processing and partner with stakeholders to deliver reliable, governed, maintainable solutions.

Infinite Computer Solutions (formerly Cotiviti Nepal) • Kathmandu, Nepal • Hybrid

Feb 2021 – Dec 2025

Cotiviti Nepal was acquired by Infinite Computer Solutions; continuous employment.

Senior Data Engineer

Mar 2025 – Dec 2025

- Built end-to-end automated ETL pipelines for Amazon, Walmart Mexico and Home Depot, processing high-volume transactional data (100GB+ daily) within client SLAs.
- Developed complex T-SQL, stored procedures and validation queries, and performance-tuned slow-running jobs and queries.
- Automated workflows with SSIS, Control-M and PowerShell, embedding rule-based and dynamic data validation.
- Implemented ML-based schema detection and data-type classification.
- Mentored junior engineers, conducted code reviews and led training on ETL best practices and SQL optimization; served on the technical hiring panel.
- Coordinated with QA, DevOps and business analysts across delivery.

Data Engineer II

Mar 2023 – Mar 2025

- Led the Actian-to-SSIS migration, including UAT and production rollout, and built UAT automation with stored procedures and functions.
- Developed QC stored procedures and database triggers for real-time data validation.
- Built Python ETL scripts automating XML and Excel file handling.

Data Engineer I

Feb 2021 – Mar 2023

- Built Actian DataConnect mappings for Oracle dump, SQL Server backup, ASCII, EBCDIC, Excel and Access sources, loading them into SQL Server.
- Developed SSIS data loads and cross-server data migrations.
- Automated jobs with Control-M and wrote PowerShell scripts that reduced manual effort.

Data Engineer

Feb 2020 – Jan 2021

Impetus Incorporation Pvt. Ltd. • Nepal

- Migrated client data to the Avionté standard, with validation ensuring 100% accurate migration.
- Normalized data and optimized queries and stored procedures in PL/SQL and T-SQL.
- Debugged and tested procedures, and executed SSIS data migration tasks.

SELECTED PROJECTS

Azure Retail ELT Pipeline (ADF) | *Azure Data Factory • Azure SQL • Blob Storage*

End-to-end ADF pipeline loading CSVs from Blob Storage to SQL: parameterized bulk staging loads, watermark-based incremental fact loads, SCD Type 2, dynamic ForEach file processing, schema-drift handling, logging, restart logic, schedule/event triggers and DIU/partition/parallelism tuning. github.com/MeePks/ADF_data_pipeline

AI-Powered Supermarket Bills Lakehouse | *Databricks • Spark Declarative Pipelines • Auto Loader • SQL*

Medallion pipeline that streams bill images/PDFs via Auto Loader, extracts text with `ai_parse_document`, structures store/items/totals with `ai_extract` into Silver, and aggregates daily/monthly spending in Gold materialized views for visualization. github.com/MeePks/SuperMarketBills-Visualization-AzureDatabricks

ML-Powered ETL Schema Detection (Master's Thesis) | *Python • pandas • scikit-learn • SQL Server*

Automated schema inference for delimited files: ML-based delimiter, header and data-type detection, generated config metadata for dynamic SQL Server table creation and loading, with logging, auditing and error tracking. github.com/MeePks/ETL-AI-Schema-Detection

Databricks PySpark Data Pipelines | *Databricks • PySpark • Spark SQL • Delta Lake*

Notebooks covering customer, product and transaction analysis, nested-JSON processing, Spark SQL and Delta Lake operations. github.com/MeePks/databricks-pyspark-data-pipelines

Python ETL & Data-Quality Utilities | *Python • pandas • SQLAlchemy • T-SQL • Tableau*

Weather ETL from OpenWeatherMap API into SQL Server for Tableau (ETL-Pipeline-Using-Python); FileFixer for repairing extra delimiters and broken line breaks in large files; TSQL-Duplication-Analyzer stored procedure for duplicate-key detection across datasets.

EDUCATION

Master of Computer Science

2023 – 2025

IIMS / Lincoln University, Malaysia — Data engineering, automation, machine learning and cloud security

Bachelor's in Computer Engineering

2016 – 2019

Kantipur Engineering College, Tribhuvan University (Nepal)

CERTIFICATIONS

- Microsoft Certified: Power BI Data Analyst Associate (PL-300) 2025
- Microsoft Certified: Azure Data Fundamentals (DP-900) 2024
- Databricks Fundamentals Accreditation
- PySpark Essential Training: Introduction to Building Data Pipelines 2026
- Tableau Advanced – Master Tableau in Data Science (Udemy) • Git Essentials: Bitbucket & SourceTree (Udemy) 2024

RECOGNITION

- “Pikesh has played a pivotal role in several key projects for major clients, including Amazon and Walmart Mexico... proficiency in ETL processes and SQL Server.” — Suraj Shakya, Data Engineer
- “Thanks for your efforts on Amazon data loading... You are fully dedicated and your communication is perfect.” — Satyanaryana Pakalapati, Delivery Lead
